

DESCRIPTION

The CL7 nozzle produces a solid cone type spray pattern from a multiple orifice body. The cluster consists of a body fitted with 7 removable solid cone spray nozzles. It provides relatively uniform distribution at all pressures and a 270° spray pattern. Flat, sharply defined spray pattern with high impact force

- Available with 3/4" - 2" BSPP
- Female threads only
- Different spray nozzles can be installed to give non-standard spray patterns for targeted cleaning
- Made in Brass and Stainless Steel as standard
- Other materials available to special order
