

DESCRIPTION

- For M1 and M3 nozzle holders
- Also available are ball with different threads to be used with other nozzles like flooding nozzle.
- Nozzles are injection molded from custom-blended polypropylene, a cost-effective material that is corrosion and heat-resistant and impervious to most chemicals.
- The tip design resists clogging and buildup due to its smooth shape and low coefficient of friction.
- A wide variety of Uni-Spray Clamp-On Nozzles are available to suit your application

Flat Spray Nozzle: High-impinging spray, excellent for cleaning, rinsing and sometimes phosphating.

Hollow Cone Nozzle: Lower-impinging spray used where high surface coverage is required, such as in the zinc phosphate stage.

Full Cone Nozzle: Used where full stationary coverage is required.

Flooding Nozzle: Used where high flow rates are required, such as in the final rinse to eliminate solution carry-over.

Threaded Ball Connection: Has NPT or BSP female threads for attaching the nozzle of your choice.
